

Despite of short shoeing intervals (nailed on steel shoes) Fred (Pony, about 15 years old) always had too flat and elongated hooves.

After only a few months in which we glued on our turfcords in intervals of about 4 weeks his hoof situation has already improved a lot.

18.sept.2023

- very straight side walls
- little white line disease
- parts of wall broken
- distinct growth rings
- heels so low that they don't touch the ground

16.jan.2024

- white line almost healthy
- side walls more round shaped
- toe angle improved a lot
- heels regenerate
- no new growth rings
- coronet seems more relaxed
